

How does a good rustproofing product work?

A good rustproofing product is a blend of several products designed to protect your vehicle against rust and corrosion. In addition, a good rustproofing product lubricates without leaking.

The base oil used to manufacture a rustproofing product primarily distributes selected additives throughout the car body and frame, as well as some of its moving parts.

Oil and rustproofing additives combine to penetrate every nook and cranny in the metal to counteract the harmful effects of rust and corrosion, and to keep them from spreading. Even when it looks as if the oil has evaporated, the additives continue to prevent and protect against deterioration.

TOTAL manufactures products that are environmentally friendly.

BIOSPEC BSV, a rustproofing product designed for industrial applications and vehicles, is made with an edible vegetable oil (canola), enhanced with additives that contain natural anti-rust agents and biodegradable polymers. This long-lasting protection is effective for over two years when vehicles are stored indoors.

BIOSPEC GEL is a leak-free biodegradable rustproofing product comparable to BIOSPEC BSV. Made with an H-1-like thickening agent, it is non-toxic and environmentally friendly, in addition to being over 90% biodegradable.

BIOSPEC

- Effective rustproofing protection
- High resistance to oxidation
- Good low- and high-temperature properties
- Excellent adherence to metal surfaces
- Non-toxic
- Clear in colour
- No unpleasant odours
- Biodegradable
- Annual application

What are the benefits of a good rustproofing treatment?

Keeps the vehicle looking new.

Extends the lifespan of the vehicle.

Increases resale value.

Keeps passengers safer by maintaining vehicle integrity.

Reduces the need for costly repairs.

Prevents deterioration and squeaking noises.

Helps the car to run better by lubricating specific moving parts, such as hinges, locks, cables, window mechanisms, etc.

Keeps nuts and bolts from seizing.

TOTAL's BIOSPEC line features two biodegradable, non-toxic rustproofing products. As proven by the ASTM B368 test, **BIOSPEC** products provide superior protection compared to standard mineral oil-based rustproofing products.

The following vehicle parts are treated:
